The Sky Was Not Amused

A Cloud Face Sequence, November 2024

A small archival sequence of a cloud face photographed in November 2024. The sky seemed to gather into a stern expression, then shift and move on. No fixed meaning. No claim. Just what showed up.

Some images arrive as a single moment.

This one arrived more like a sequence - a patch of sky held long enough to be watched, photographed, and remembered.

The face was not named at the time. It did not need to be. It simply passed through the cloud bank with a look that felt less than amused.

The cloud bank begins to gather around the light.

The expression deepens near the bright opening.

The form holds long enough to feel noticed.

The sky shifts, but the mood remains.

The face leaves its strongest little record.

Closing note

The sky made a face.

Or the clouds arranged themselves for a moment.

Either way, Clara kept looking.
Either way, the image stayed.

No fixed meaning.
Just what showed up.

Bless them all.
We stayed here laughing.
